

# project profile

## Project

School project

Crawley

UK

## System

Betoflor

Betoatlas

## Quantity

196 m<sup>2</sup>

## Application

Earth Retaining walls

The 500mm wide Betoatlas and 250mm wide Betoflor units were put to use on a number of locations at this new-build school project.

This particular photograph details a raised parking and turning area created by a subtle plateauing of the sloping ground. The grey Betoatlas units show their flexibility with the ability to step the foundations tangential to the slope as well as being able to form the irregular corner detail without the need for separate units.
