

project profile

Project

Housing development

Lydney

UK

System

Betoflor

Betoatlas

Leromur

Quantity

850 m²

Application

Earth Retaining walls

Constructing a hillside housing development is both a challenge and an opportunity.

For the landscaper it offers another dimension to work with where retaining walls can be transformed into planting opportunities. For the incoming owner this provides a ready made template but with the ability to add much more, pot ducks included!

This particular project lasted for several years with a regular flow of deliveries for the planted Betoflor (as shown) and Betoatlas systems as well as the split stone effect of the Leromur blocks for step flights and vertical wall requirements. Terracing such as shown became a feature throughout the site with the buff coloured units harmonising with the wooden screen fencing.

Each wall was constructed to a design produced by the Betocalcul software with the 10 year warranty matching that of the development's insured cover.
